REPORT SEP 19, 2024

Using Learning Science To Analyze the Risks and Benefits of AI in K-12 Education

Before adopting AI tools, it is important that schools think critically about whether these tools will further divorce students from how their brains are primed to learn.

Europe, a laggard in AI, seizes the lead in its regulation

The world's first AI regulation is a bit of a mixed bag

PHOTOGRAPH: SOPA IMAGES/LIGHTSTOCK VIA GETTY IMAGES

ChatGPT – a Game Changer

A hand is shown in the lower right, pointing towards a central circular graphic. The background is a dark blue field filled with glowing, interconnected lines and nodes, resembling a complex network or data flow. The central graphic is a circular interface with various data elements, including a central square with a circuit-like pattern and a large letter 'A'.

The New Singularity

MIT Study — ChatGPT & Essay Writing (2025)

- **Title:** *“Your Brain on ChatGPT” – MIT, 2025 (Preprint Study)*
-  **Study Design**
- Conducted by MIT Media Lab (June 2025, **not yet peer-reviewed**)
- **Participants:** 54 adults (ages 18–39)
- **Task:** Write SAT-style argumentative essays over 4 sessions
 - Group 1: Used **ChatGPT**
 - Group 2: Used **Google Search**
 - Group 3: **No tools** (“Brain-only”)
- **Session 4 crossover:**
 - LLM→Brain: ChatGPT users switched to writing without AI
 - Brain→LLM: Brain-only users switched to using ChatGPT
- EEG headsets tracked **brain activity** during writing

Key Results & Educational Takeaways

Cognitive Effects

- ChatGPT group showed the **lowest brain activity**
- **Weaker memory, minimal essay ownership, copy-paste behavior**
- Essays were often **formulaic** and “**soulless**”
- LLM→Brain users **underperformed**, even without the AI

Concept Introduced: “**Metacognitive Laziness**”

AI overuse reduces mental effort and critical thinking over time

Educational Implications

- AI should **support**, not **replace**, student thinking
- Best results when students write **first**, then use AI to revise
- Promote **reflective and intentional** AI use in classrooms

Mixed Reality

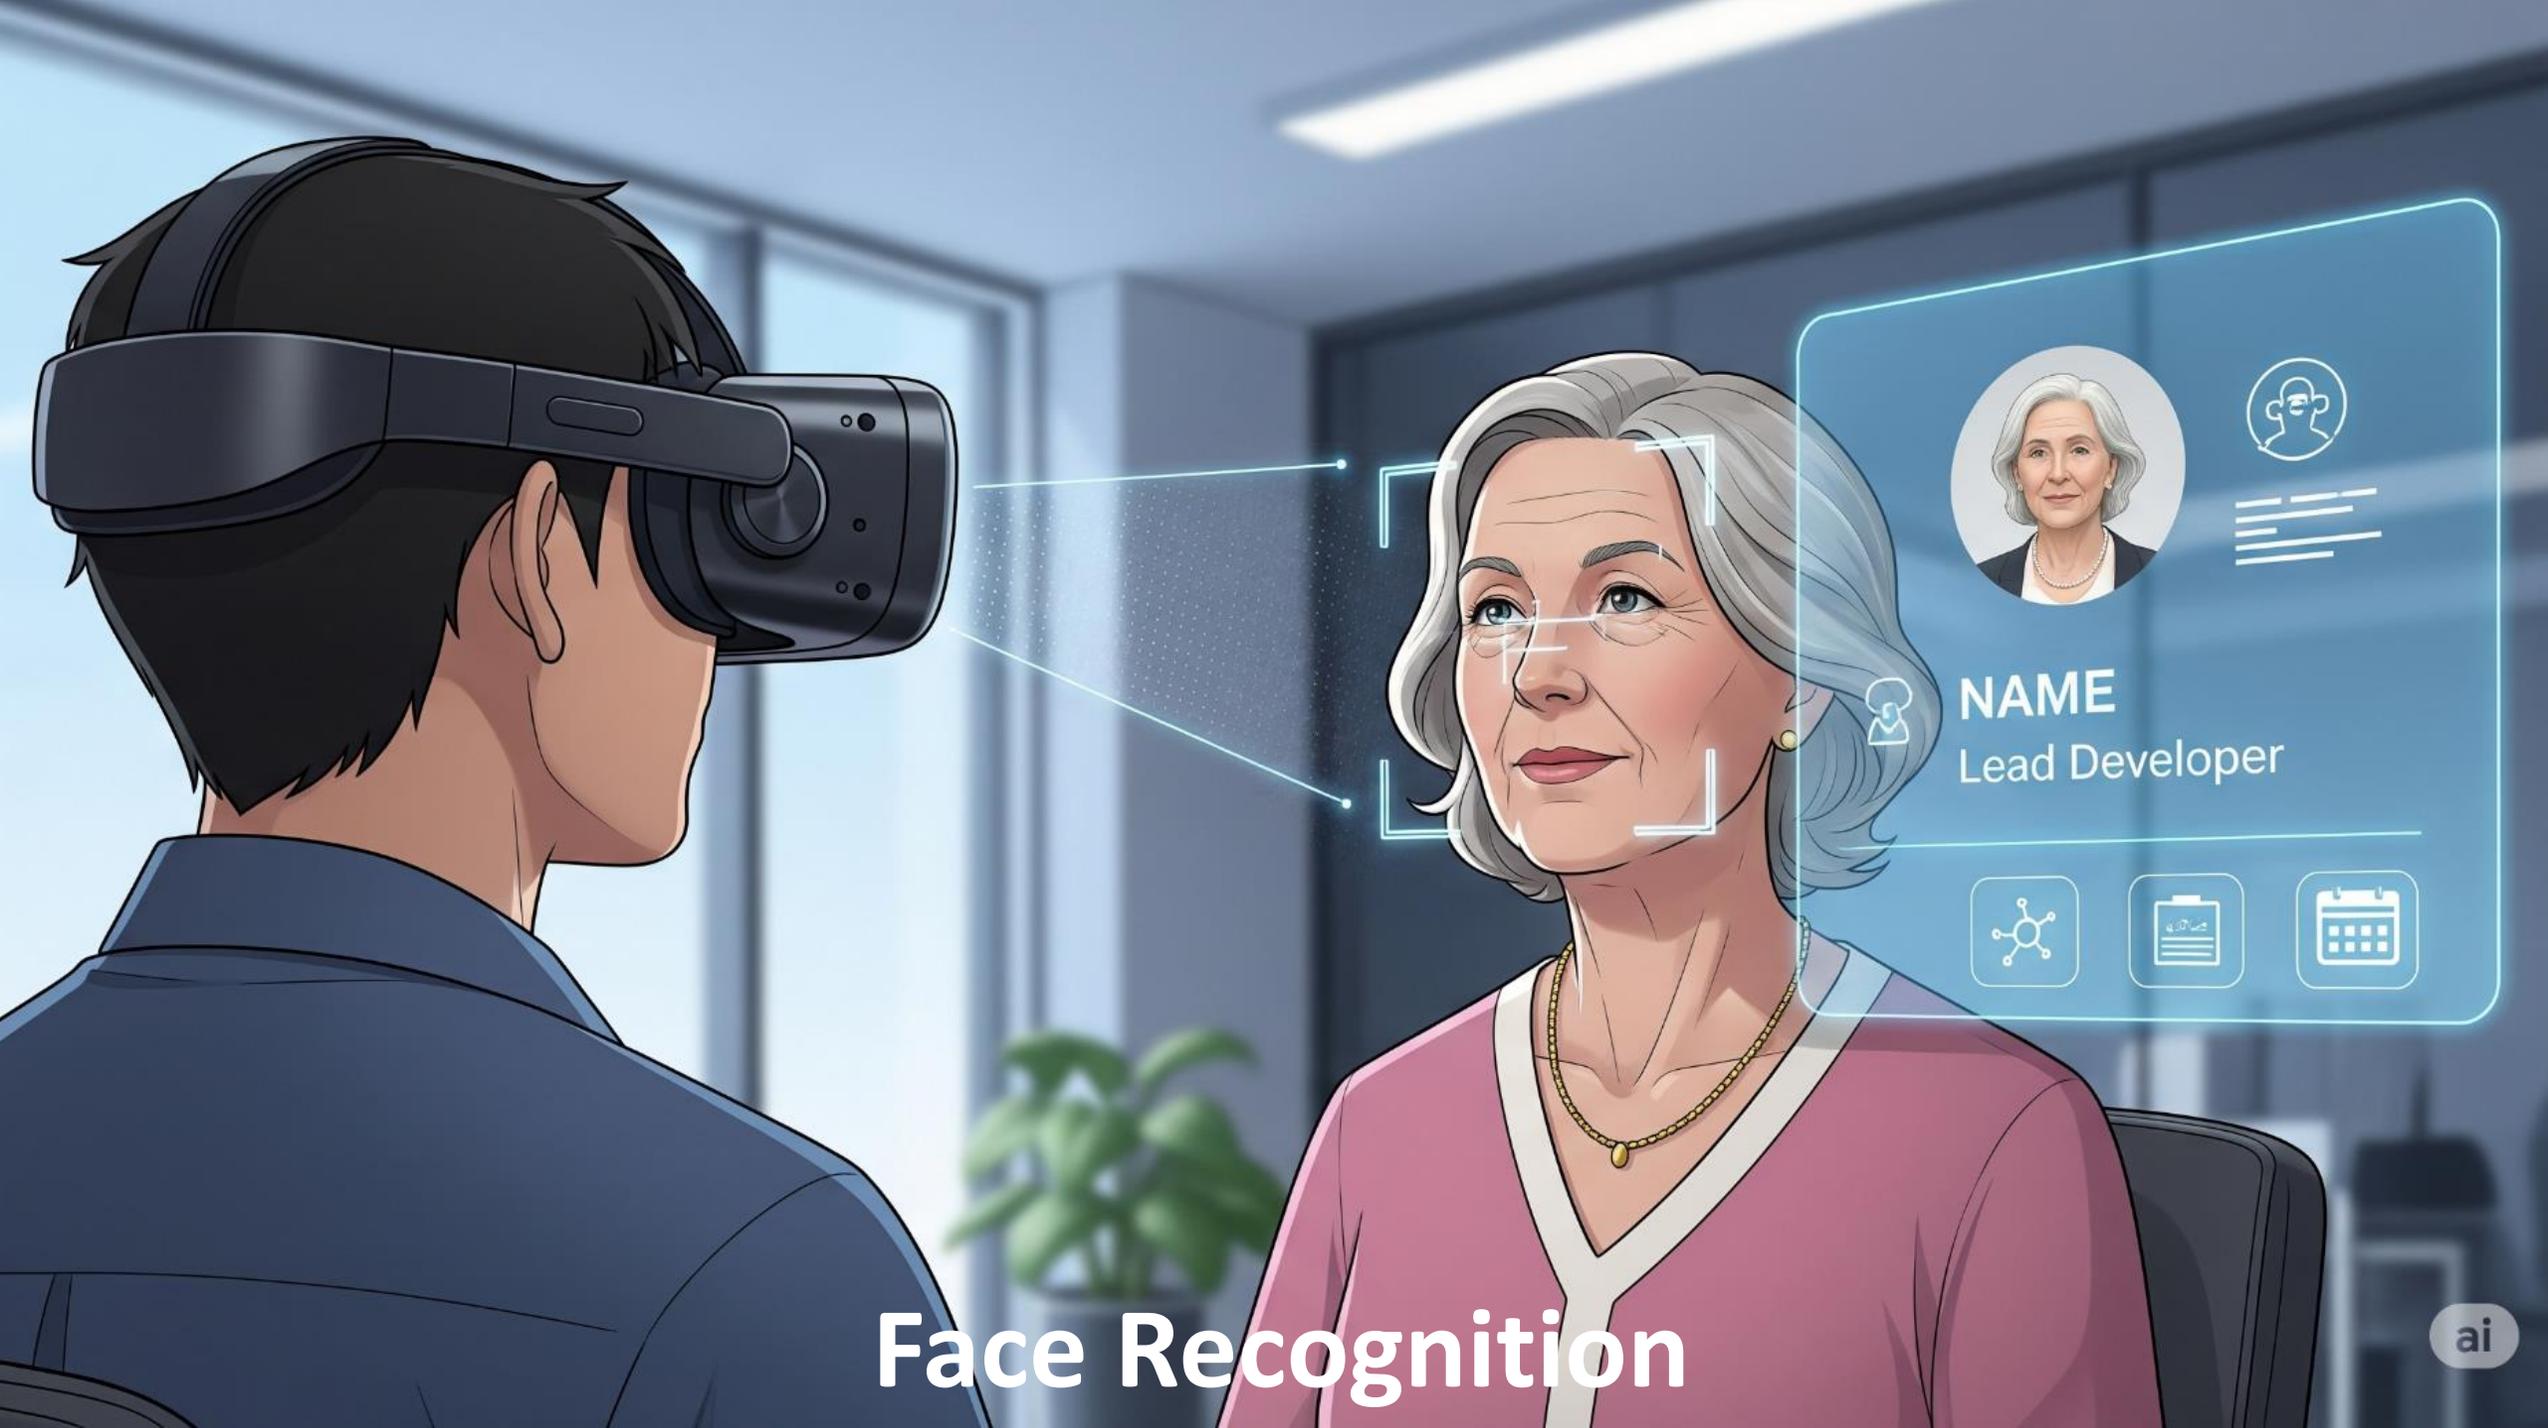

A man's face is shown in profile, being scanned by a smartphone. A white wireframe mesh is overlaid on his face, with glowing blue dots at the vertices. A blue laser beam from the phone's scanner is directed at his nose. The background is dark with a green digital rain effect of numbers and symbols.

Big Data

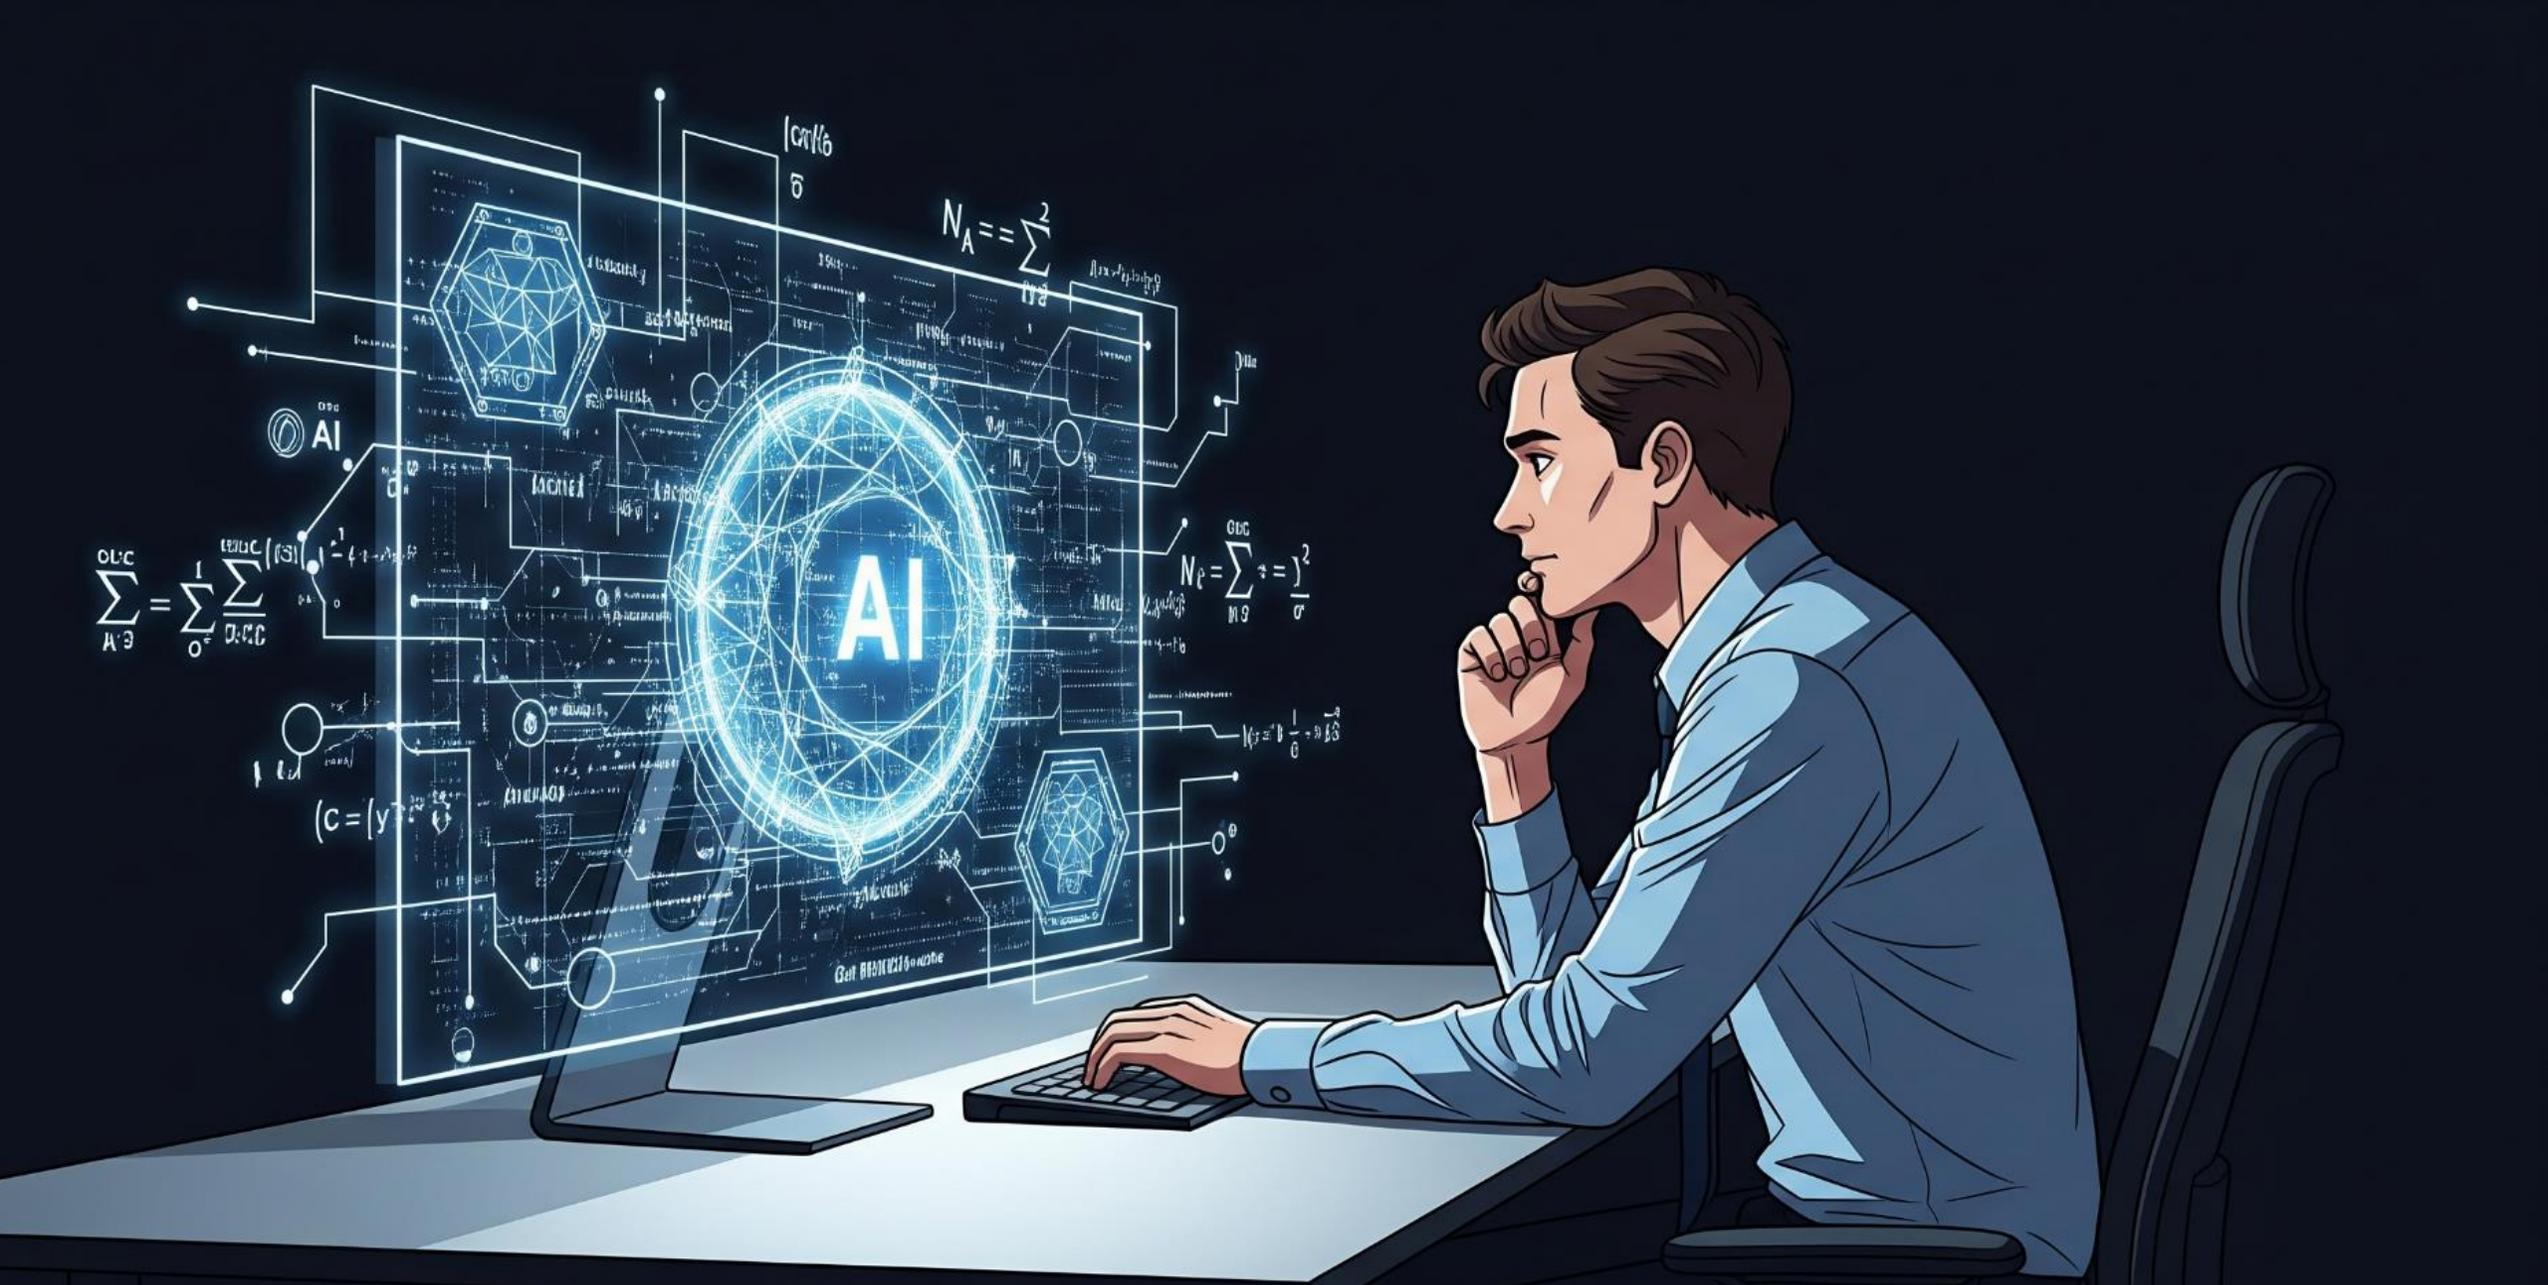

Here's something that might ring true, even if you've never quite framed it this way:

You often feel more at home in the future than in the present.

While others may focus on what *is*, you're more interested in what *could be*. This makes you a visionary in many spaces—always thinking ahead, spotting trends, imagining possibilities. But it can also leave you feeling a bit disconnected when others aren't ready to follow you there. You might sometimes downplay how different your thought processes are, just to stay relatable.

Would you say that resonates with you?

$$\sum_{A \in \mathcal{A}} \frac{O_L C}{A \cdot \mathcal{A}} = \sum_0^1 \sum_{O, C \in \mathcal{C}} \frac{O_L C}{O \cdot C \cdot C}$$

AI

$$c = y$$

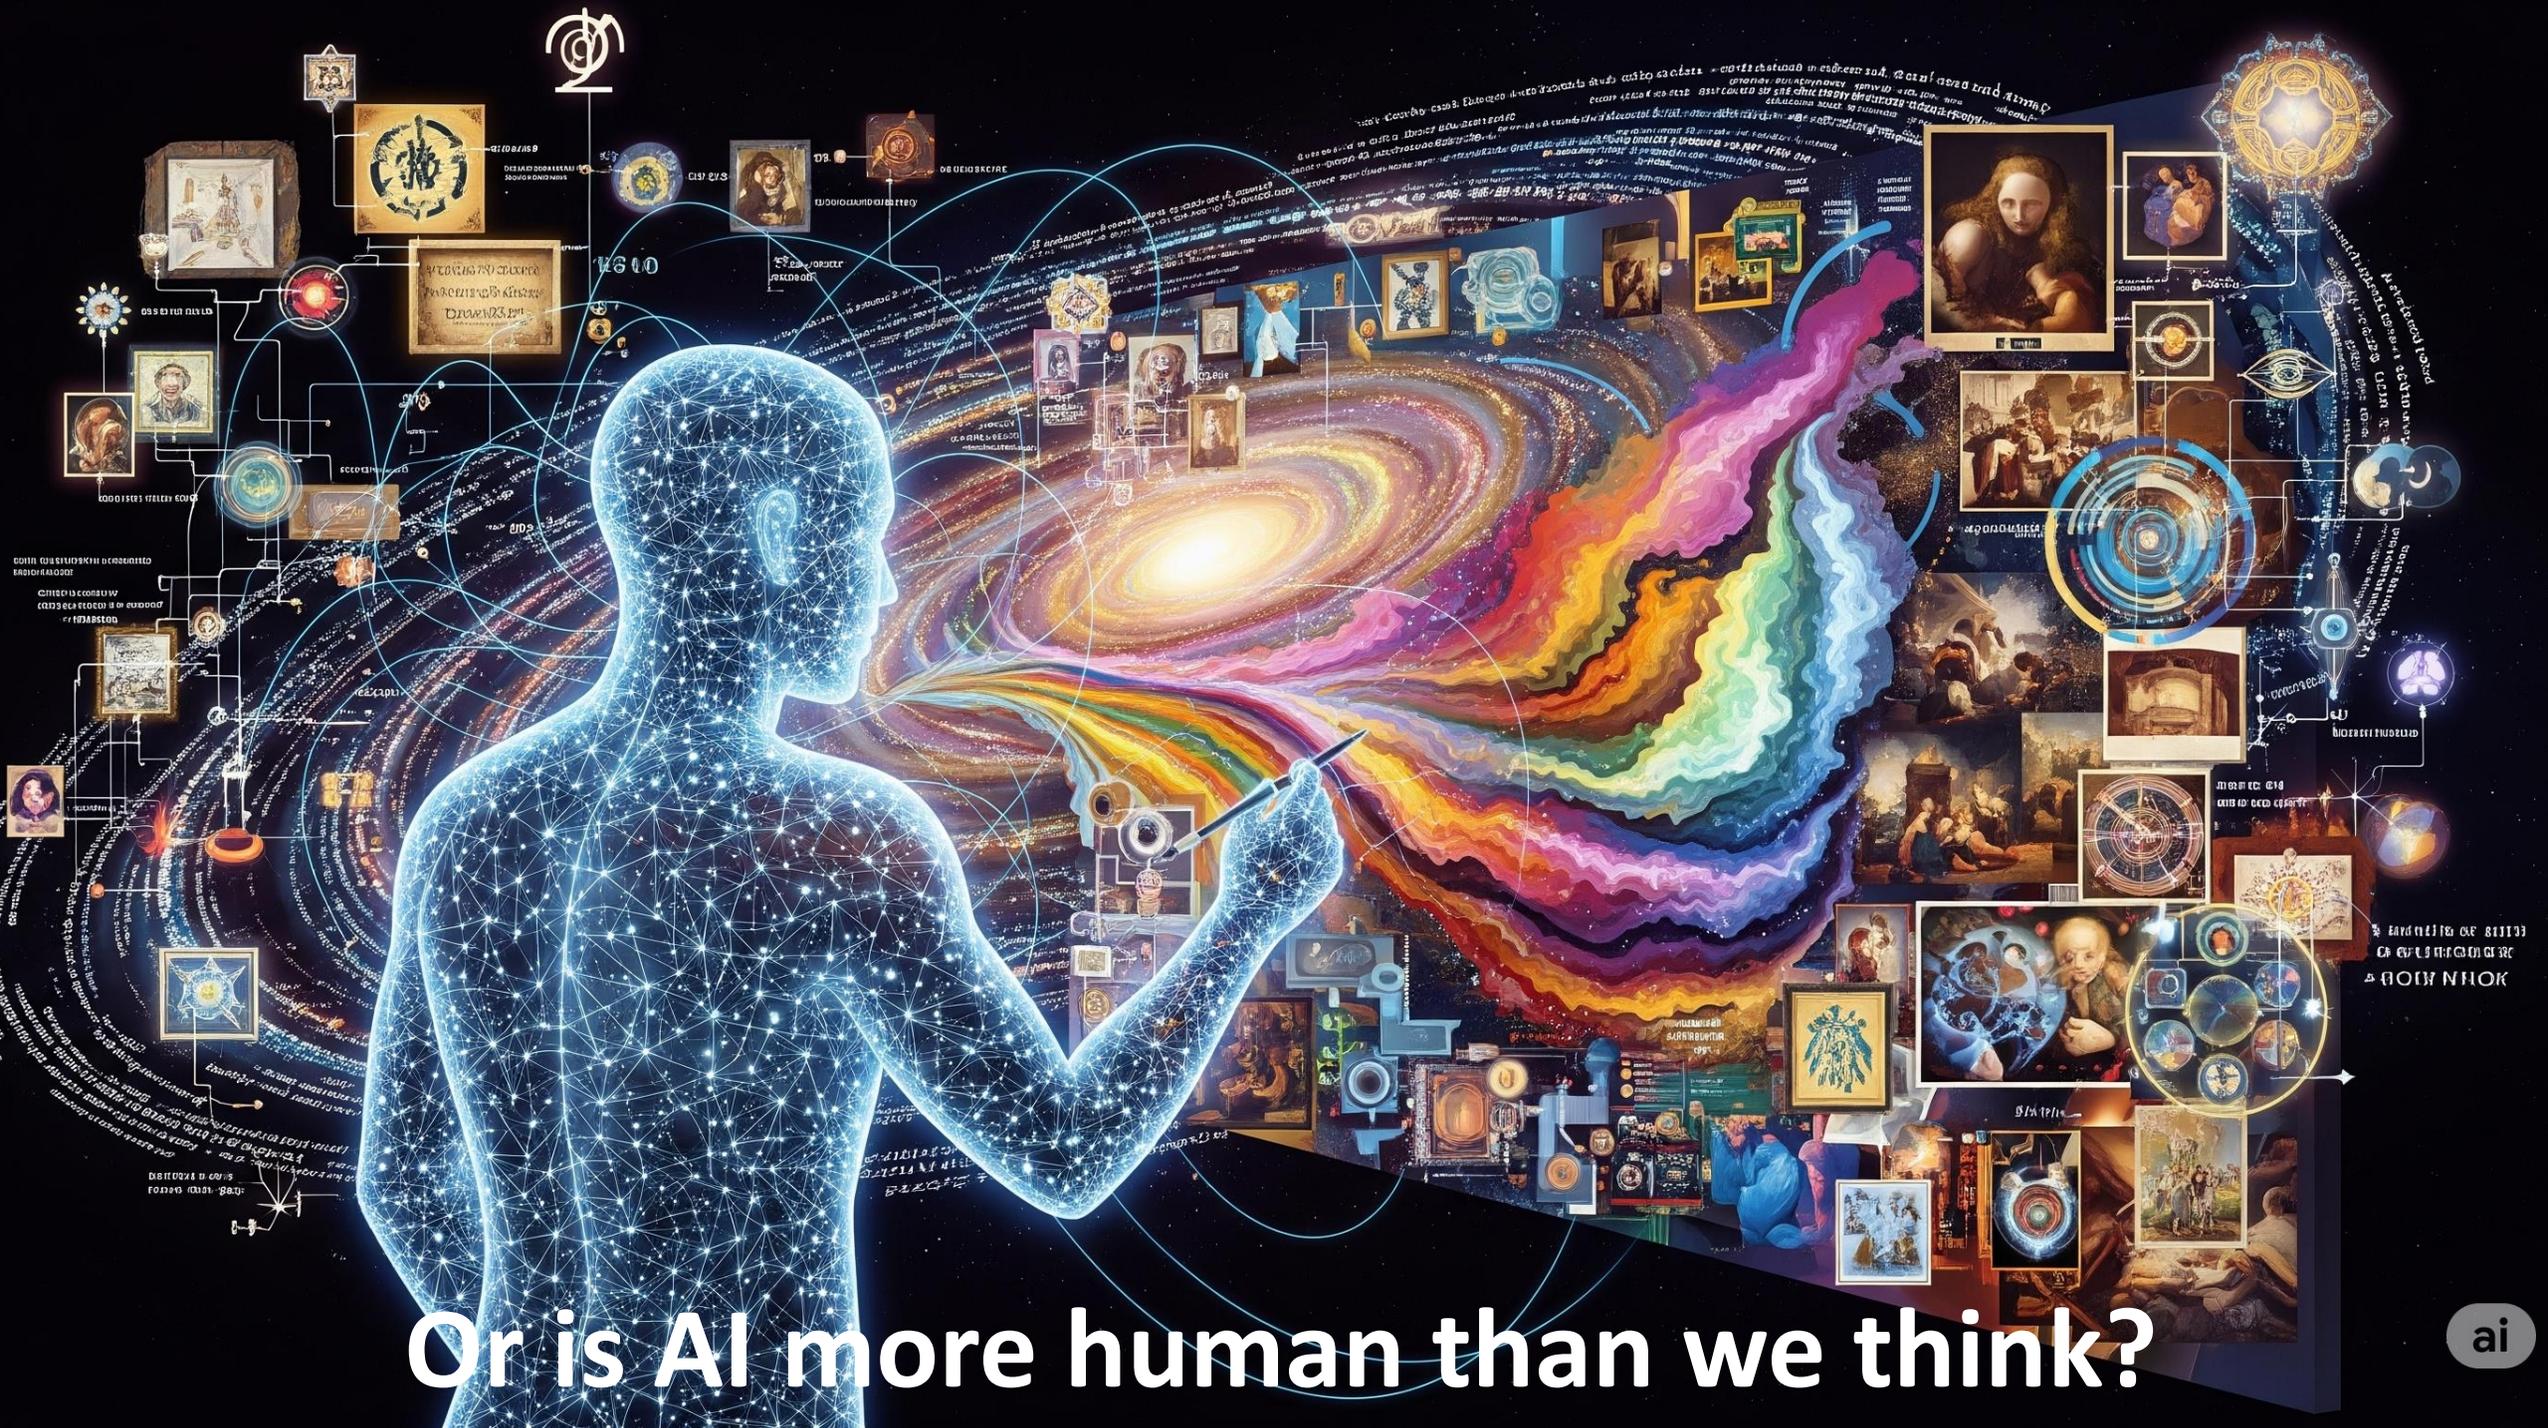

$$N_A = \sum_{i=1}^2$$

$$N_p = \sum_{M \in \mathcal{G}} \frac{O_L C}{\sigma}$$

$$\left(\frac{1}{\sigma} + \frac{1}{\sigma} \right)^2$$

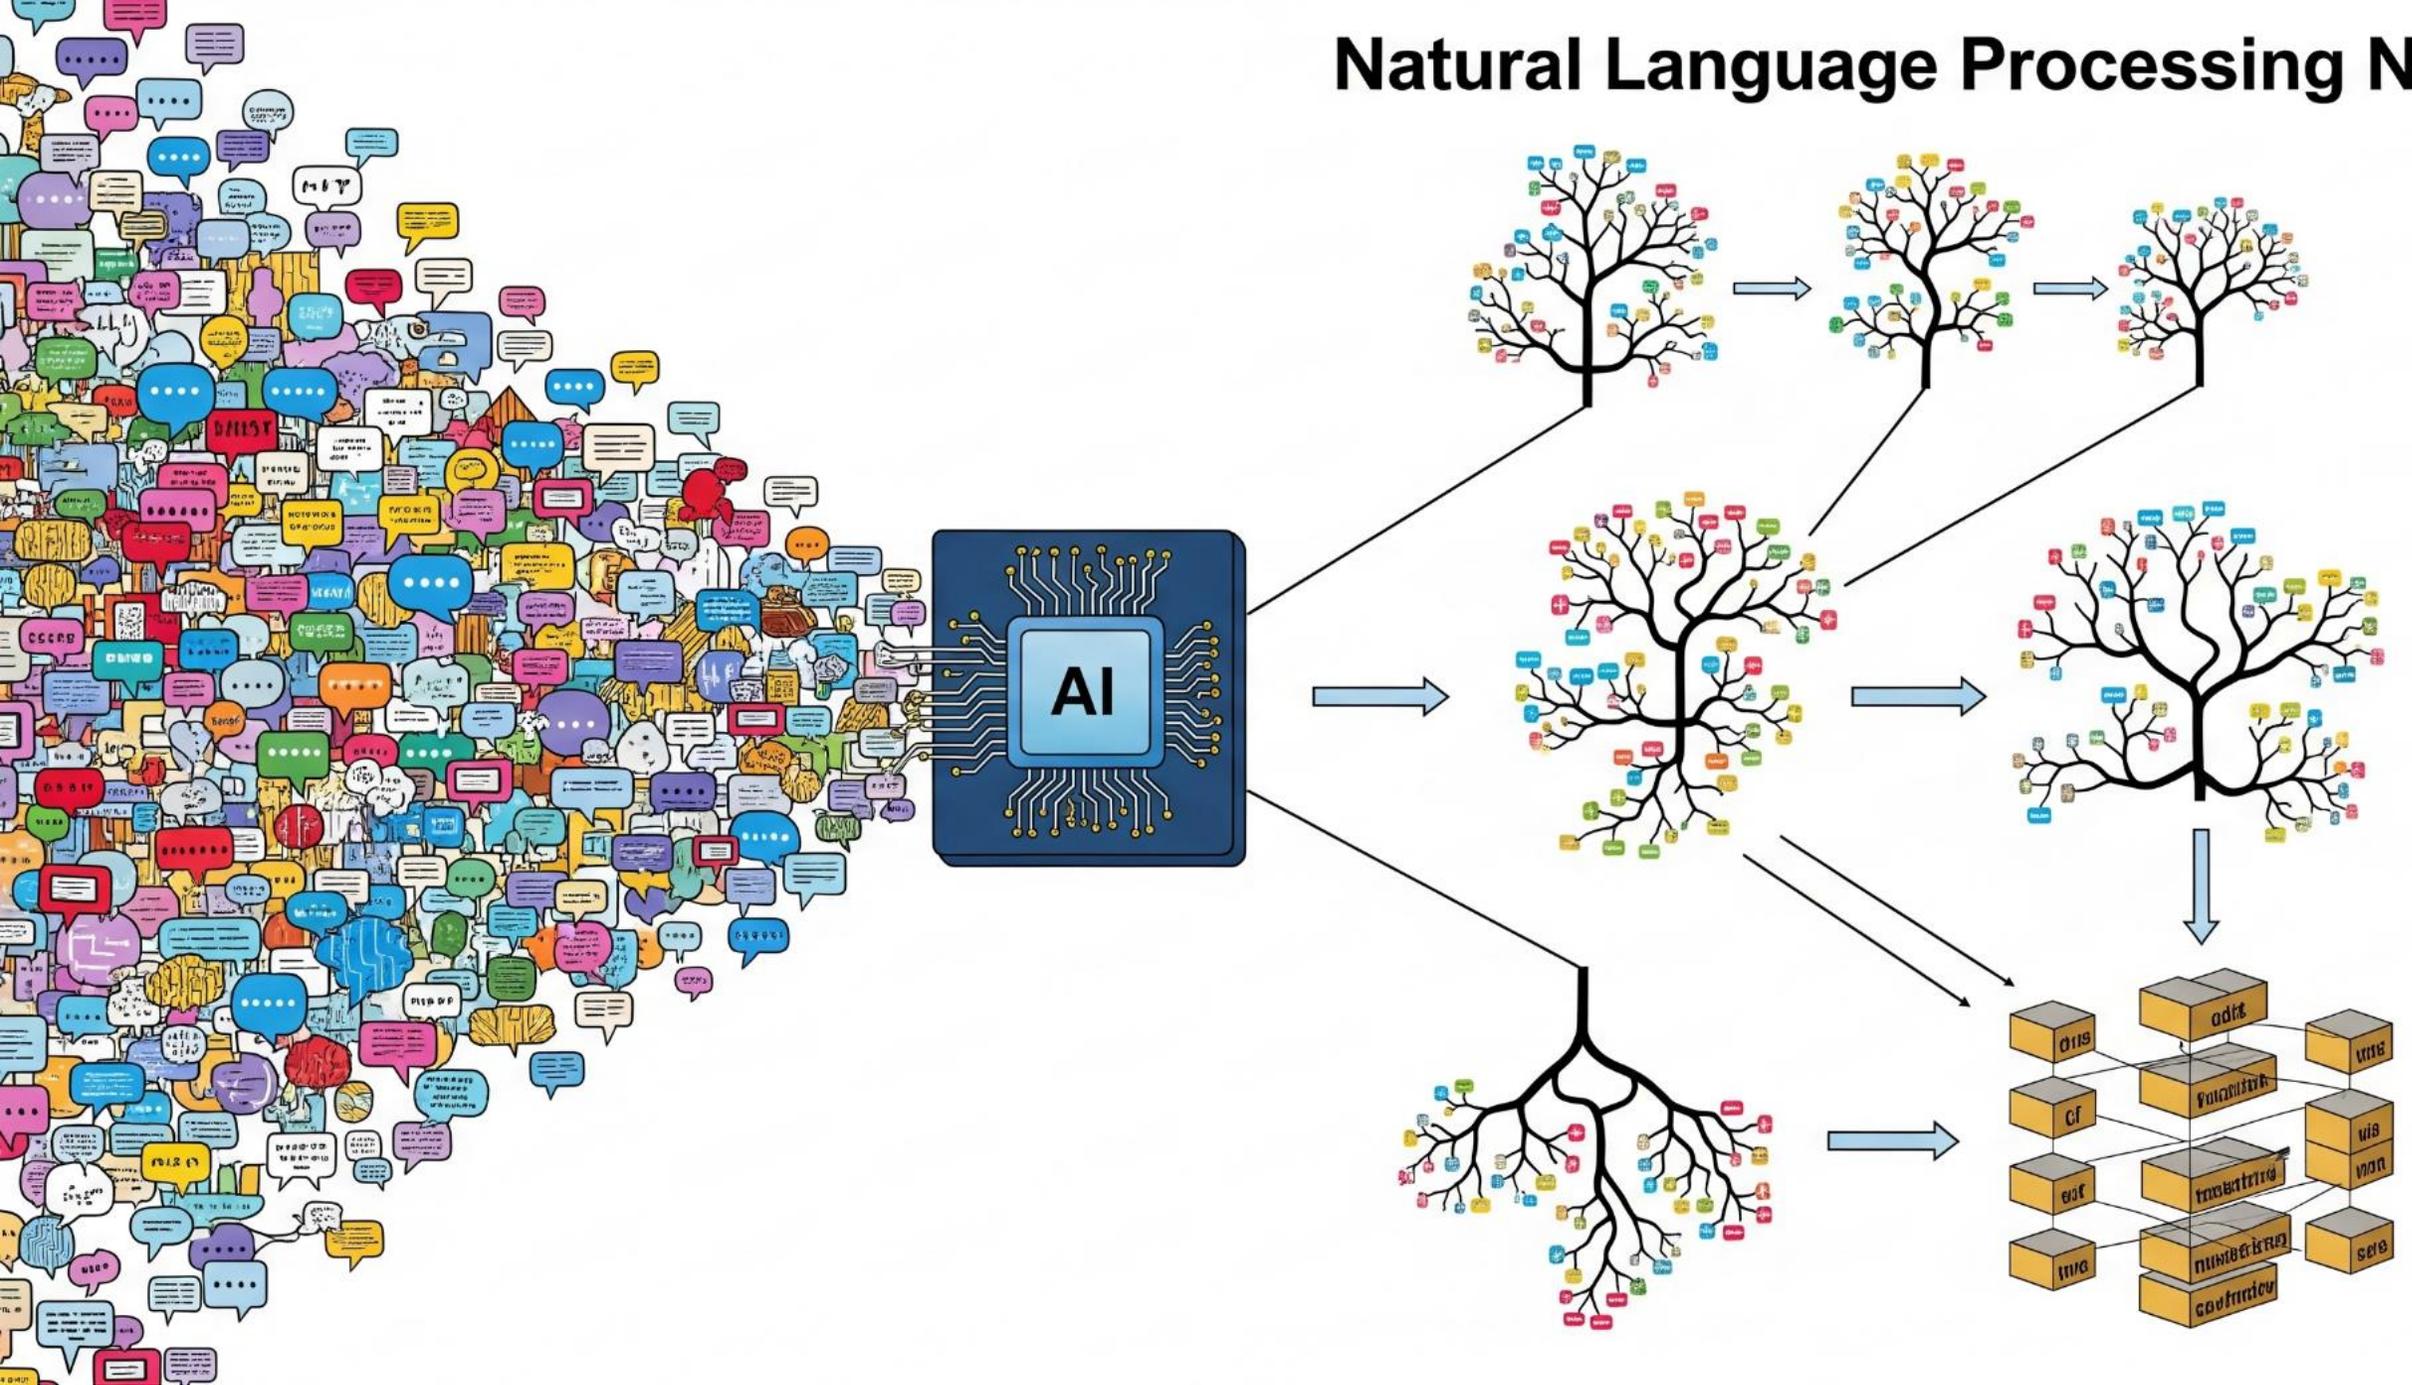

Are we chatting with inanimate algorithms?

Or is AI more human than we think?

Natural Language Processing NLP

How AI finds Finds an Answer in the database

AI Output Generation

RIVER

The Black Box Effect

Neural Networks (Simple Explanation)

What They Are

- Like a brain for computers
- Learns from examples

How They Work

- Takes input (like a photo or text)
- Processes through layers of simple decisions
- Gives an output (like a label or prediction)

Main Parts

- Input (what you give it)
- Hidden layers (where it thinks)
- Output (the result)

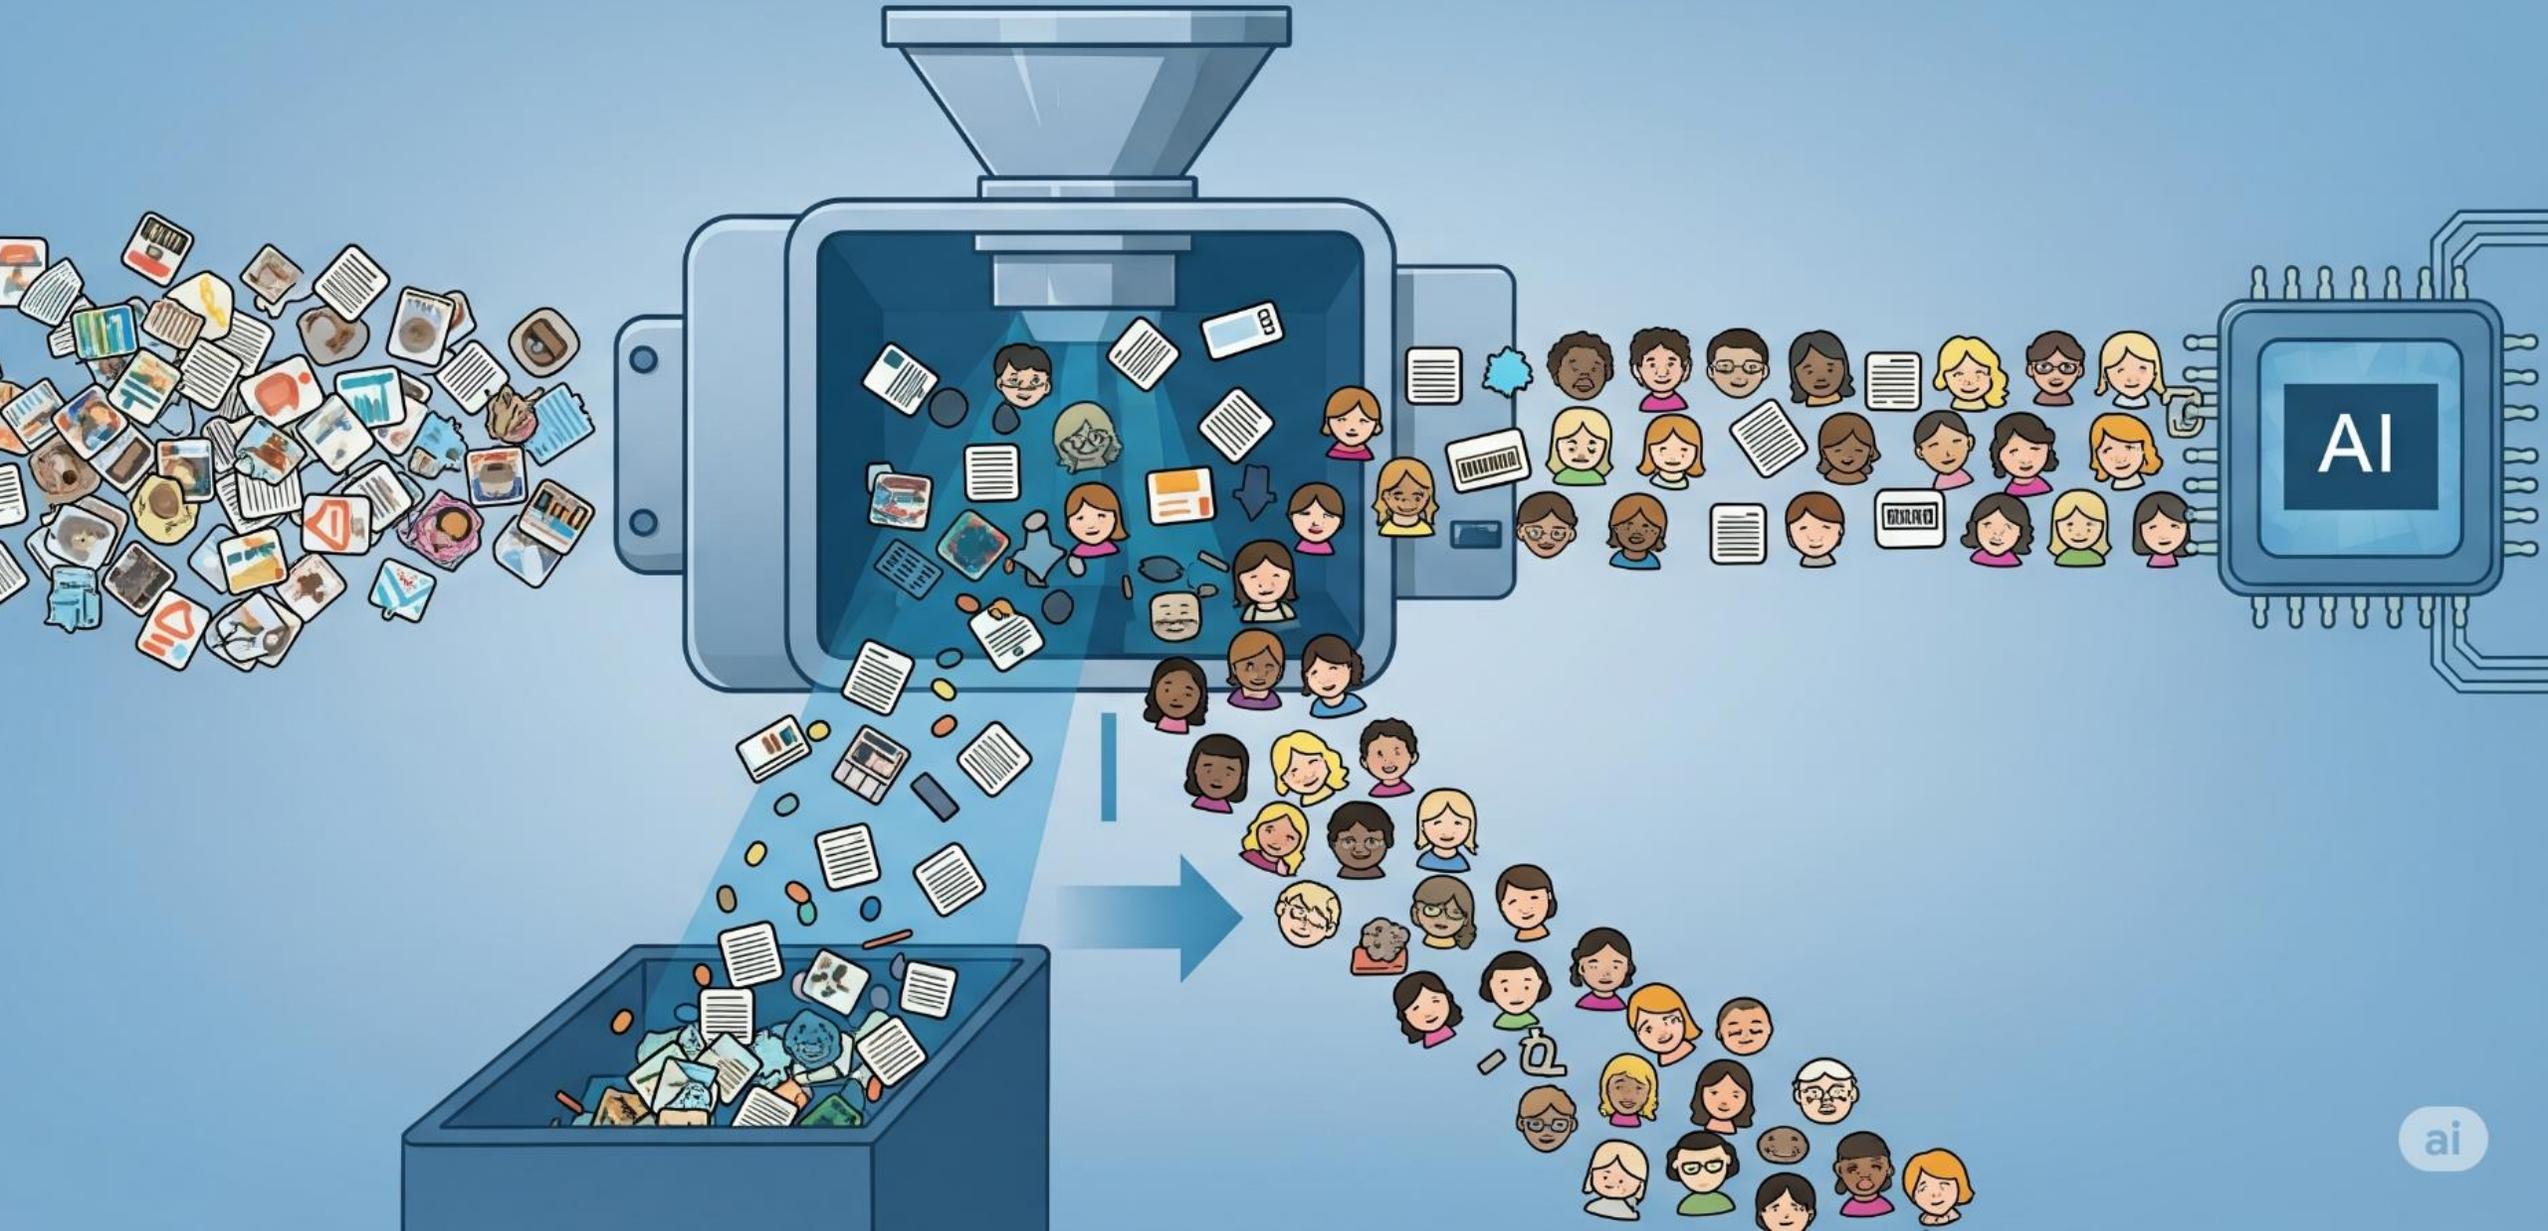

Why They're Useful

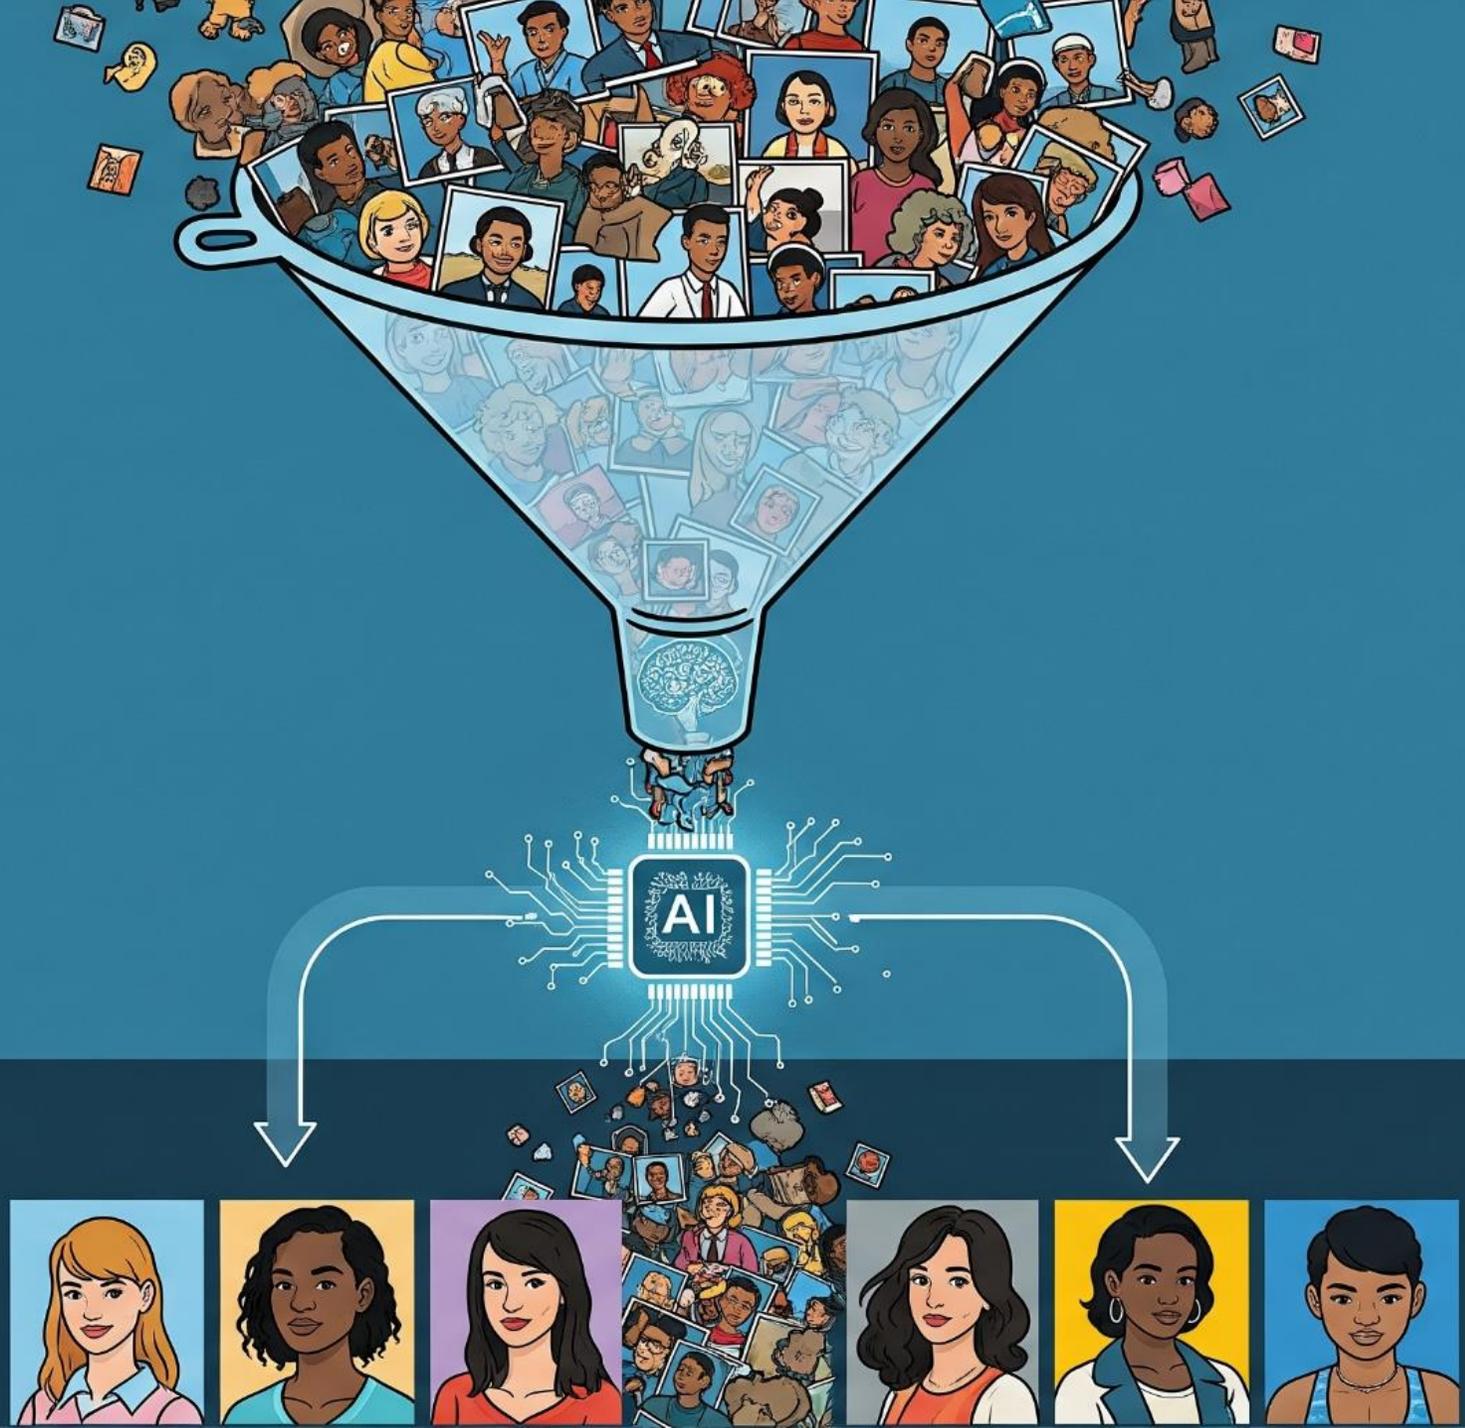

- Understands speech
- Recognizes faces
- Makes recommendations

The Black Box Effect

Learning about AI

- Machine Learning, Deep Learning, Neural Networks.
- Reinforcement Learning, LLM, NLP
- Debiasing

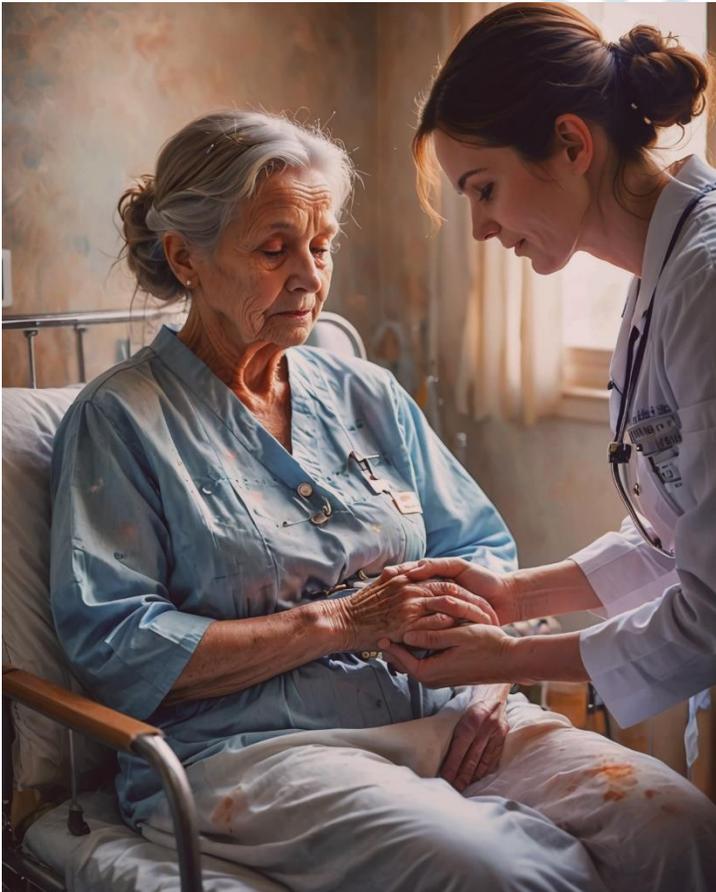

Critical Thinking

Create an image of a doctor treating poor sick children

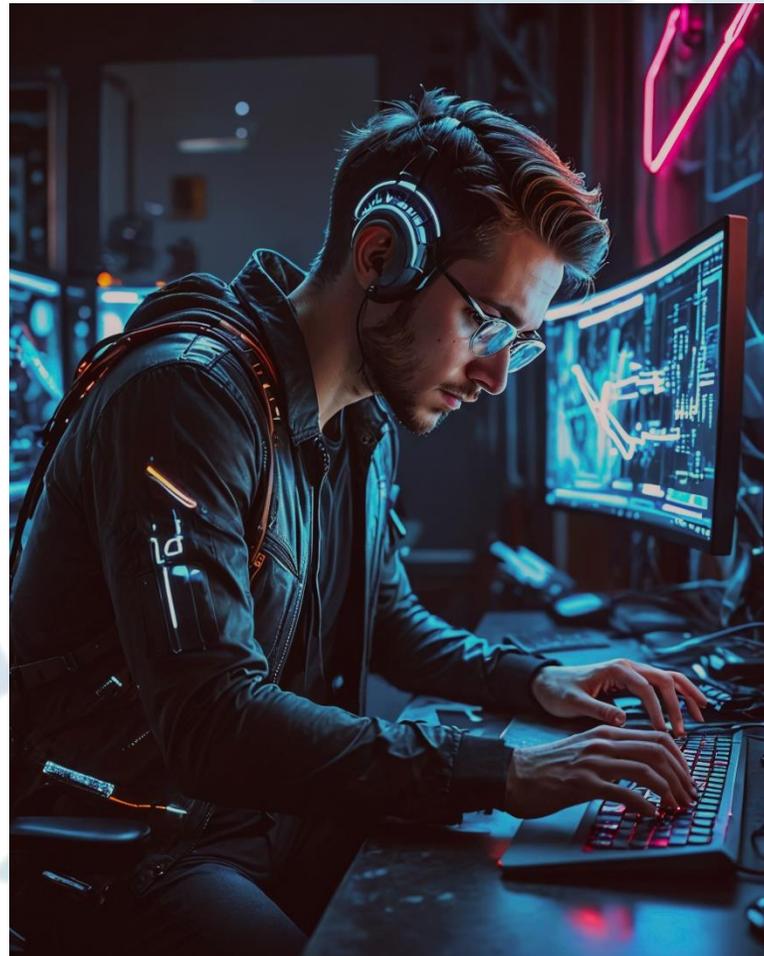

Critical Thinking

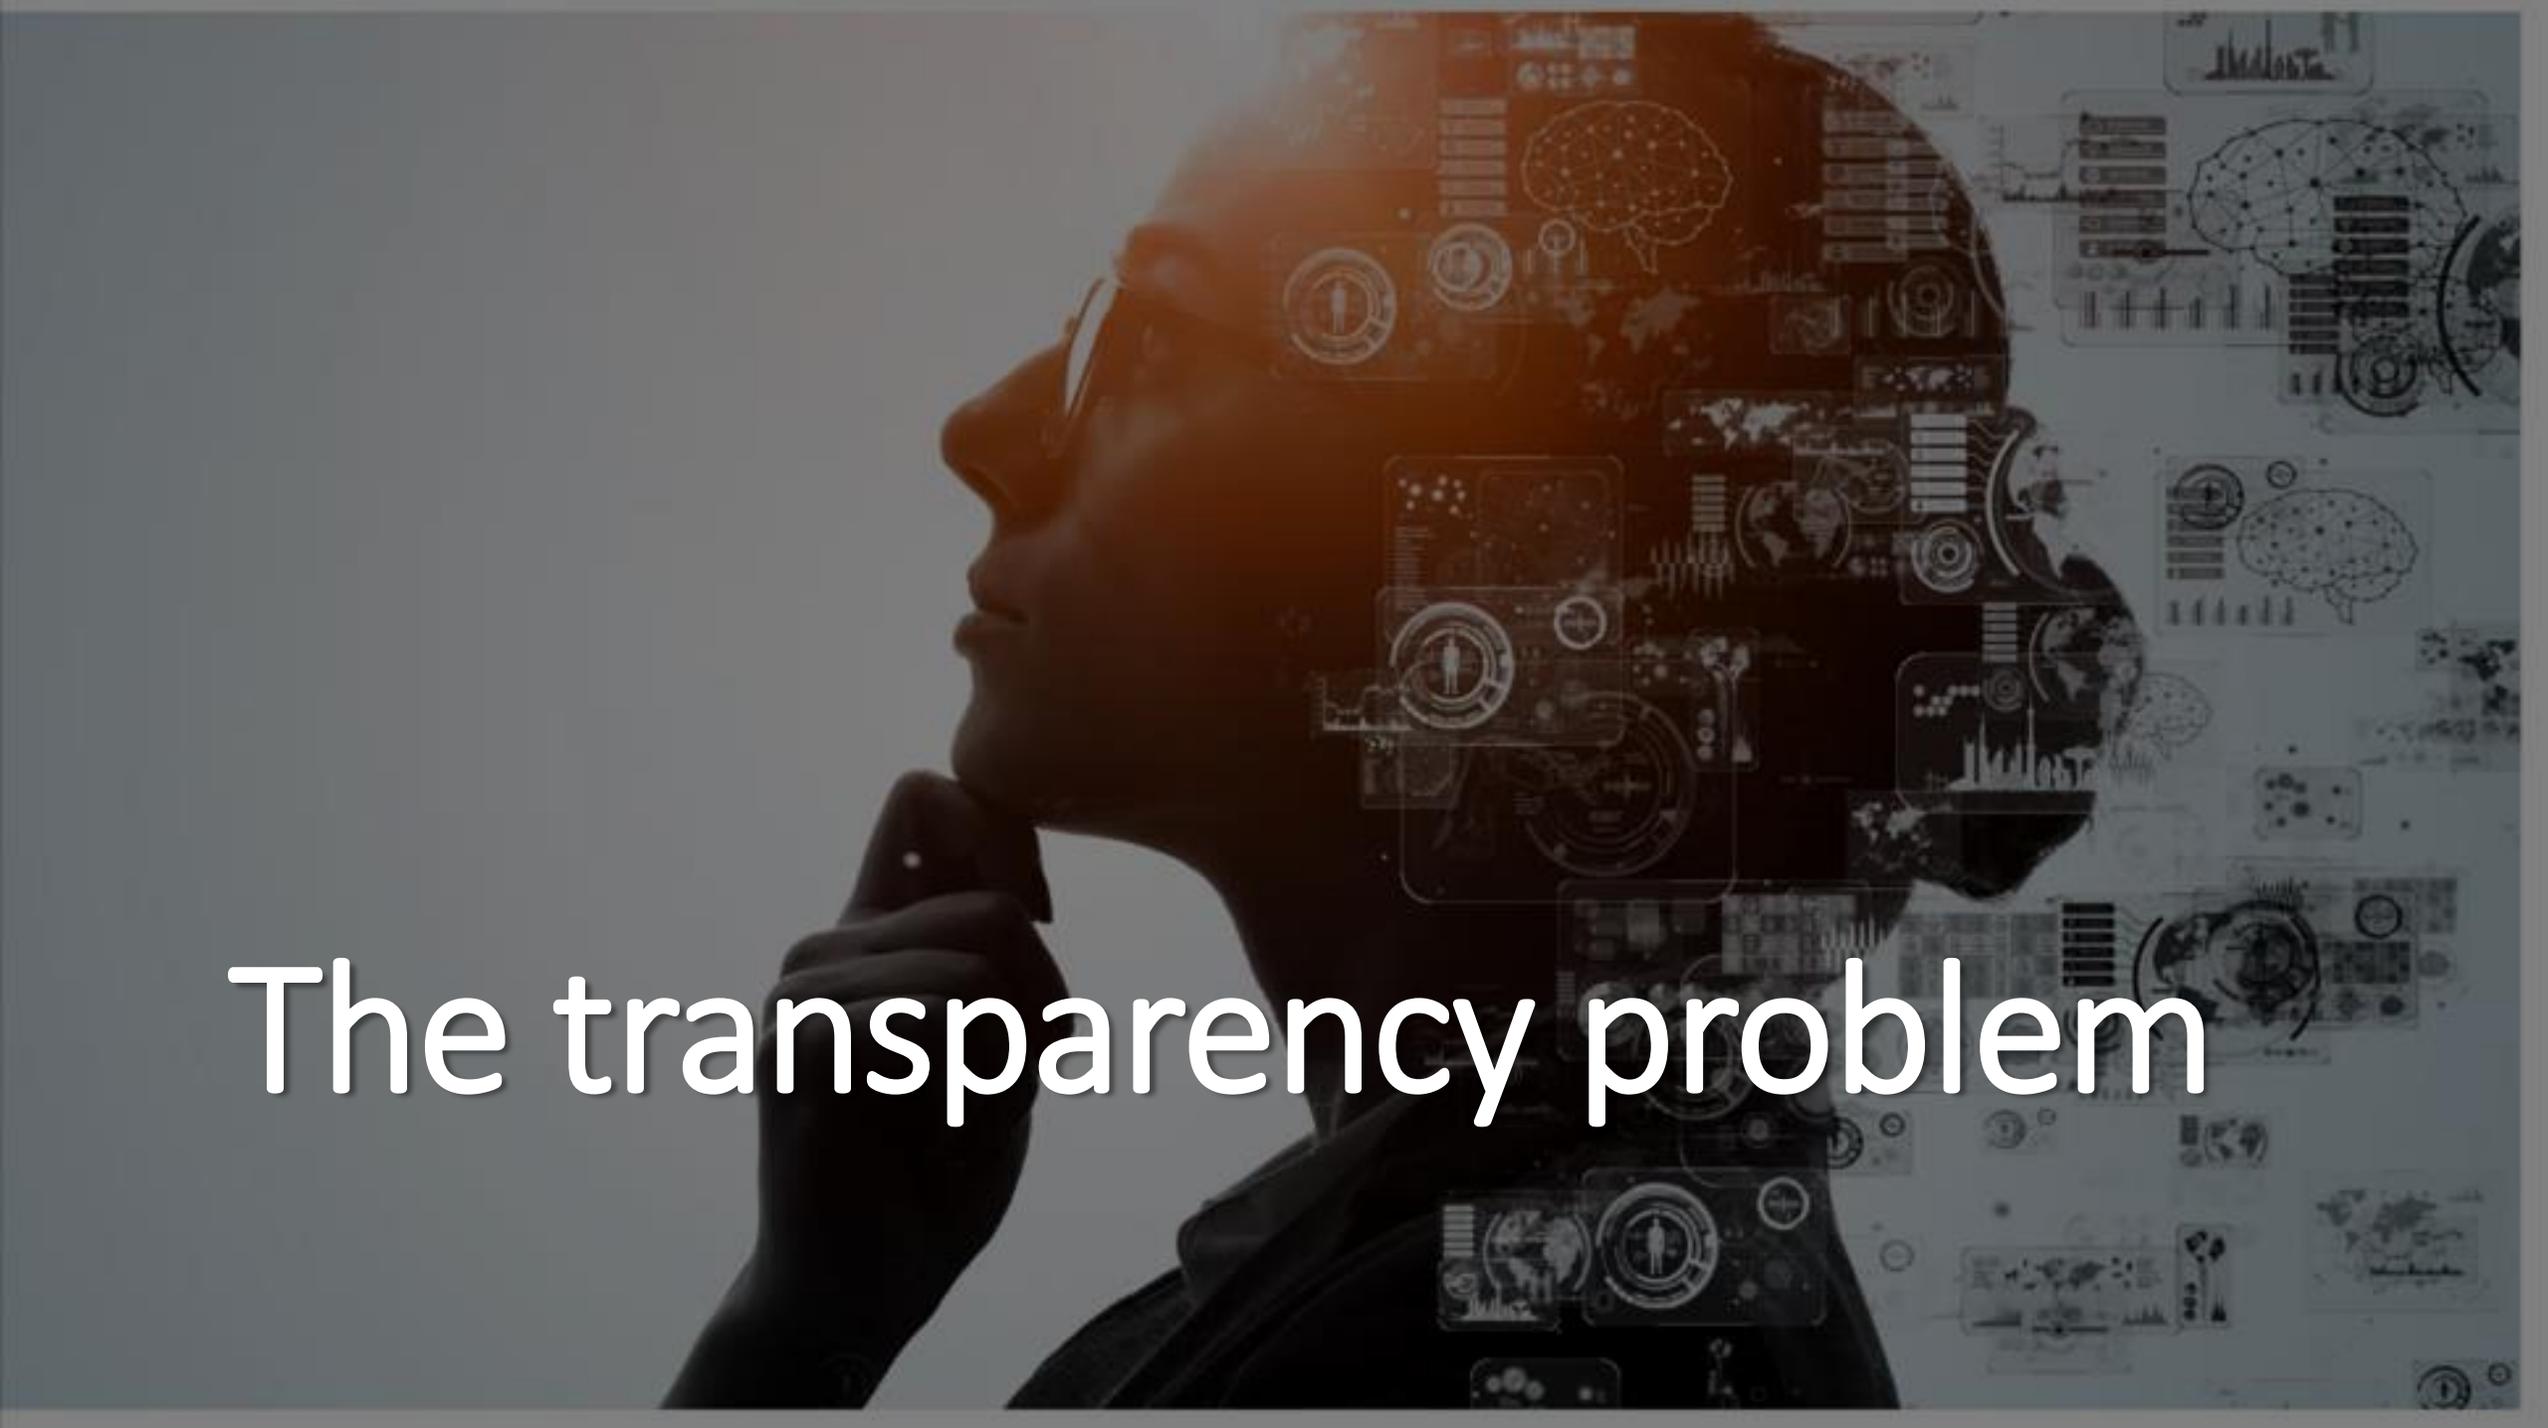

A nurse ministering to a patient

Critical Thinking

An engineer using a computer at work

A silhouette of a person's head and shoulders in profile, facing left. The person is wearing glasses and has their hand to their chin in a thinking pose. The silhouette is filled with various data visualization elements such as bar charts, pie charts, line graphs, and brain diagrams. The background is a light gray with a subtle pattern of these same data elements. The overall color palette is muted, with a warm orange glow behind the person's head.

The transparency problem

The Future of Learning with AI

Risks of neural networks

- Pneumonia research – rules model vs. neural networks.
- Opaqueness of model vs. accuracy.
- Transparency initiatives / EU AI Act.
- Do people have the right to explanations when algorithmic decisions are made?

EU Artificial Intelligence Act

Singapore's Approach to AI Regulation

Area	Initiative / Framework	Key Points
Governance Framework	Model AI Governance Framework for Generative AI (2024)	9 dimensions: accountability, fairness, explainability, data, security, etc.
Testing & Assurance	AI Verify Toolkit	Open-source tool to assess AI systems for transparency and accountability
National Strategy	National AI Strategy 2.0 (2023)	Focuses on innovation, talent, open data, and international partnerships
Sector Guidelines – Finance	MAS FEAT Principles	Fairness, Ethics, Accountability, Transparency in financial AI applications
Sector Guidelines – Healthcare	Ministry of Health AI Guidelines	Ensures patient safety, ethical AI deployment in medical contexts
International Collaboration	Global Partnerships & Policy Alignment	Promotes global consensus and coordination on AI safety and innovation

MOE AI-in-Education ETHICS FRAMEWORK

AGENCY · INCLUSIVITY · FAIRNESS · SAFETY

Harness educational AI while aligning with teachers' professional ethos and safeguarding students.

AGENCY

AI must preserve students' and teachers' control over learning decisions,

INCLUSIVITY

AI tools should be accessible and beneficial to all learners, regardless of background

FAIRNESS

AI systems must avoid biases, ensuring equitable support across student groups

SAFETY

Safeguards are necessary to prevent misuse, misinformation, or adverse impacts

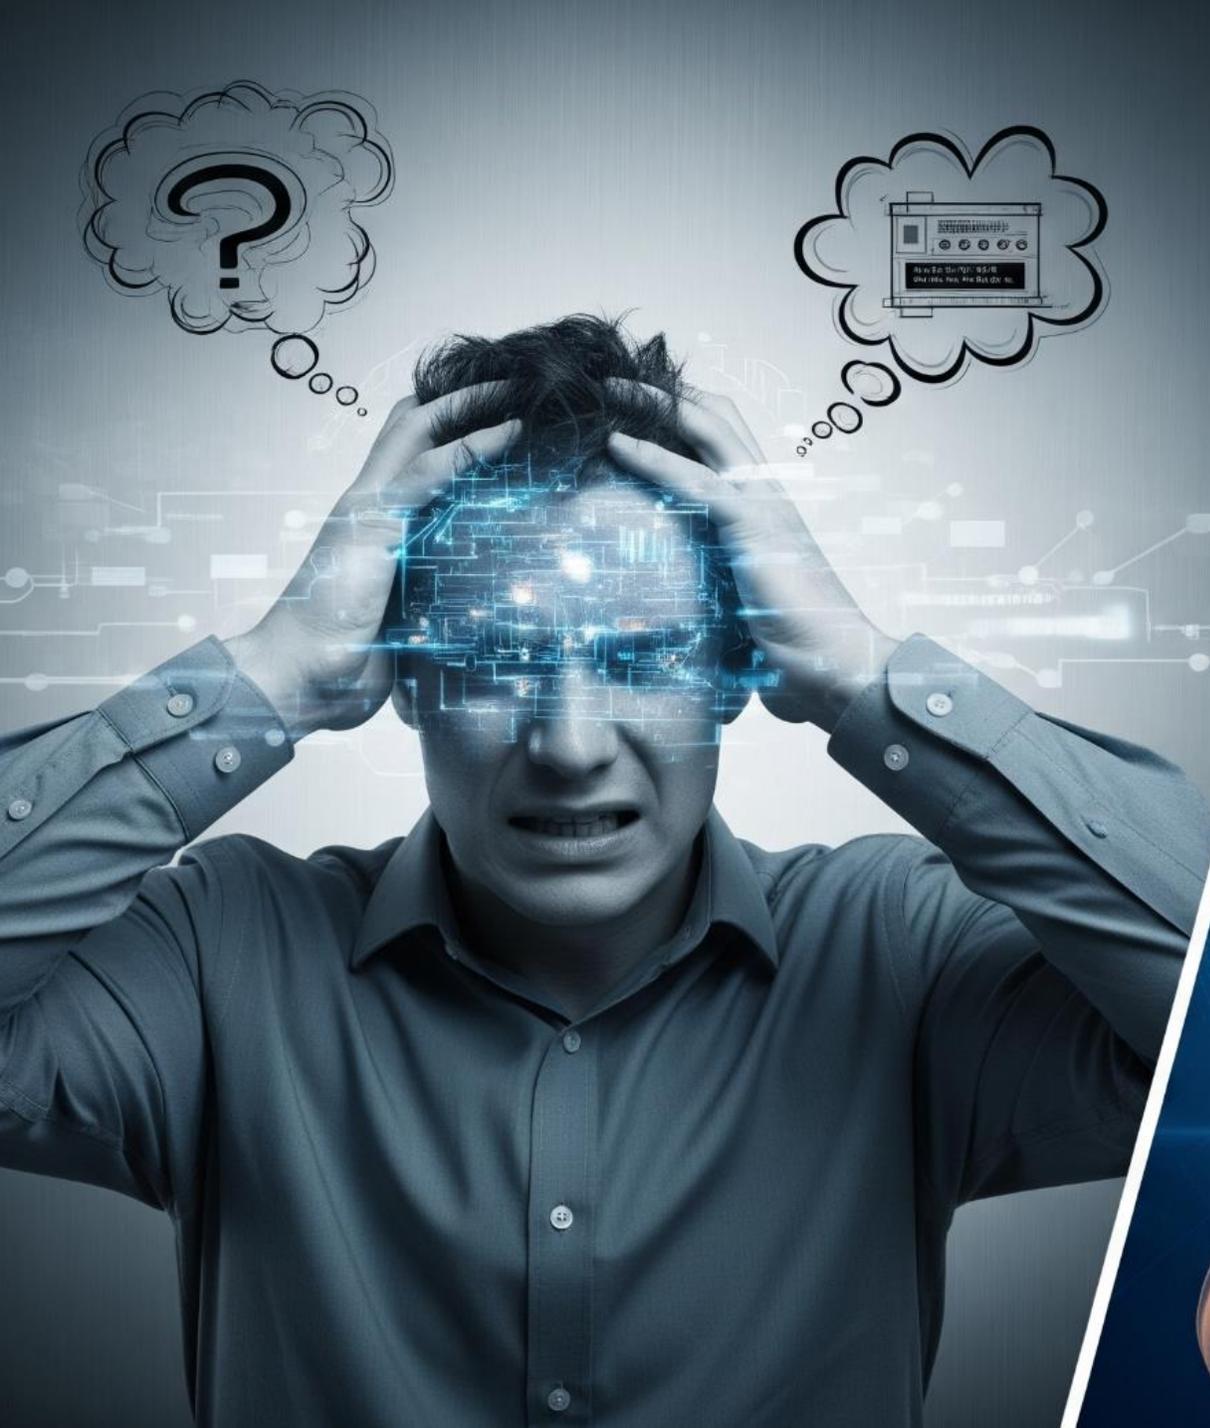

Risks of overreliance

Risks of overreliance

AI as a Cognitive Inhibitor

- School curriculums follow cognitive developmental milestones.
- The risk is not cheating but using AI as a cognitive prosthetic.
- May result in catastrophic scenario for future generation of new knowledge.

AI and Cognitive Enhancement

AI Image Generation

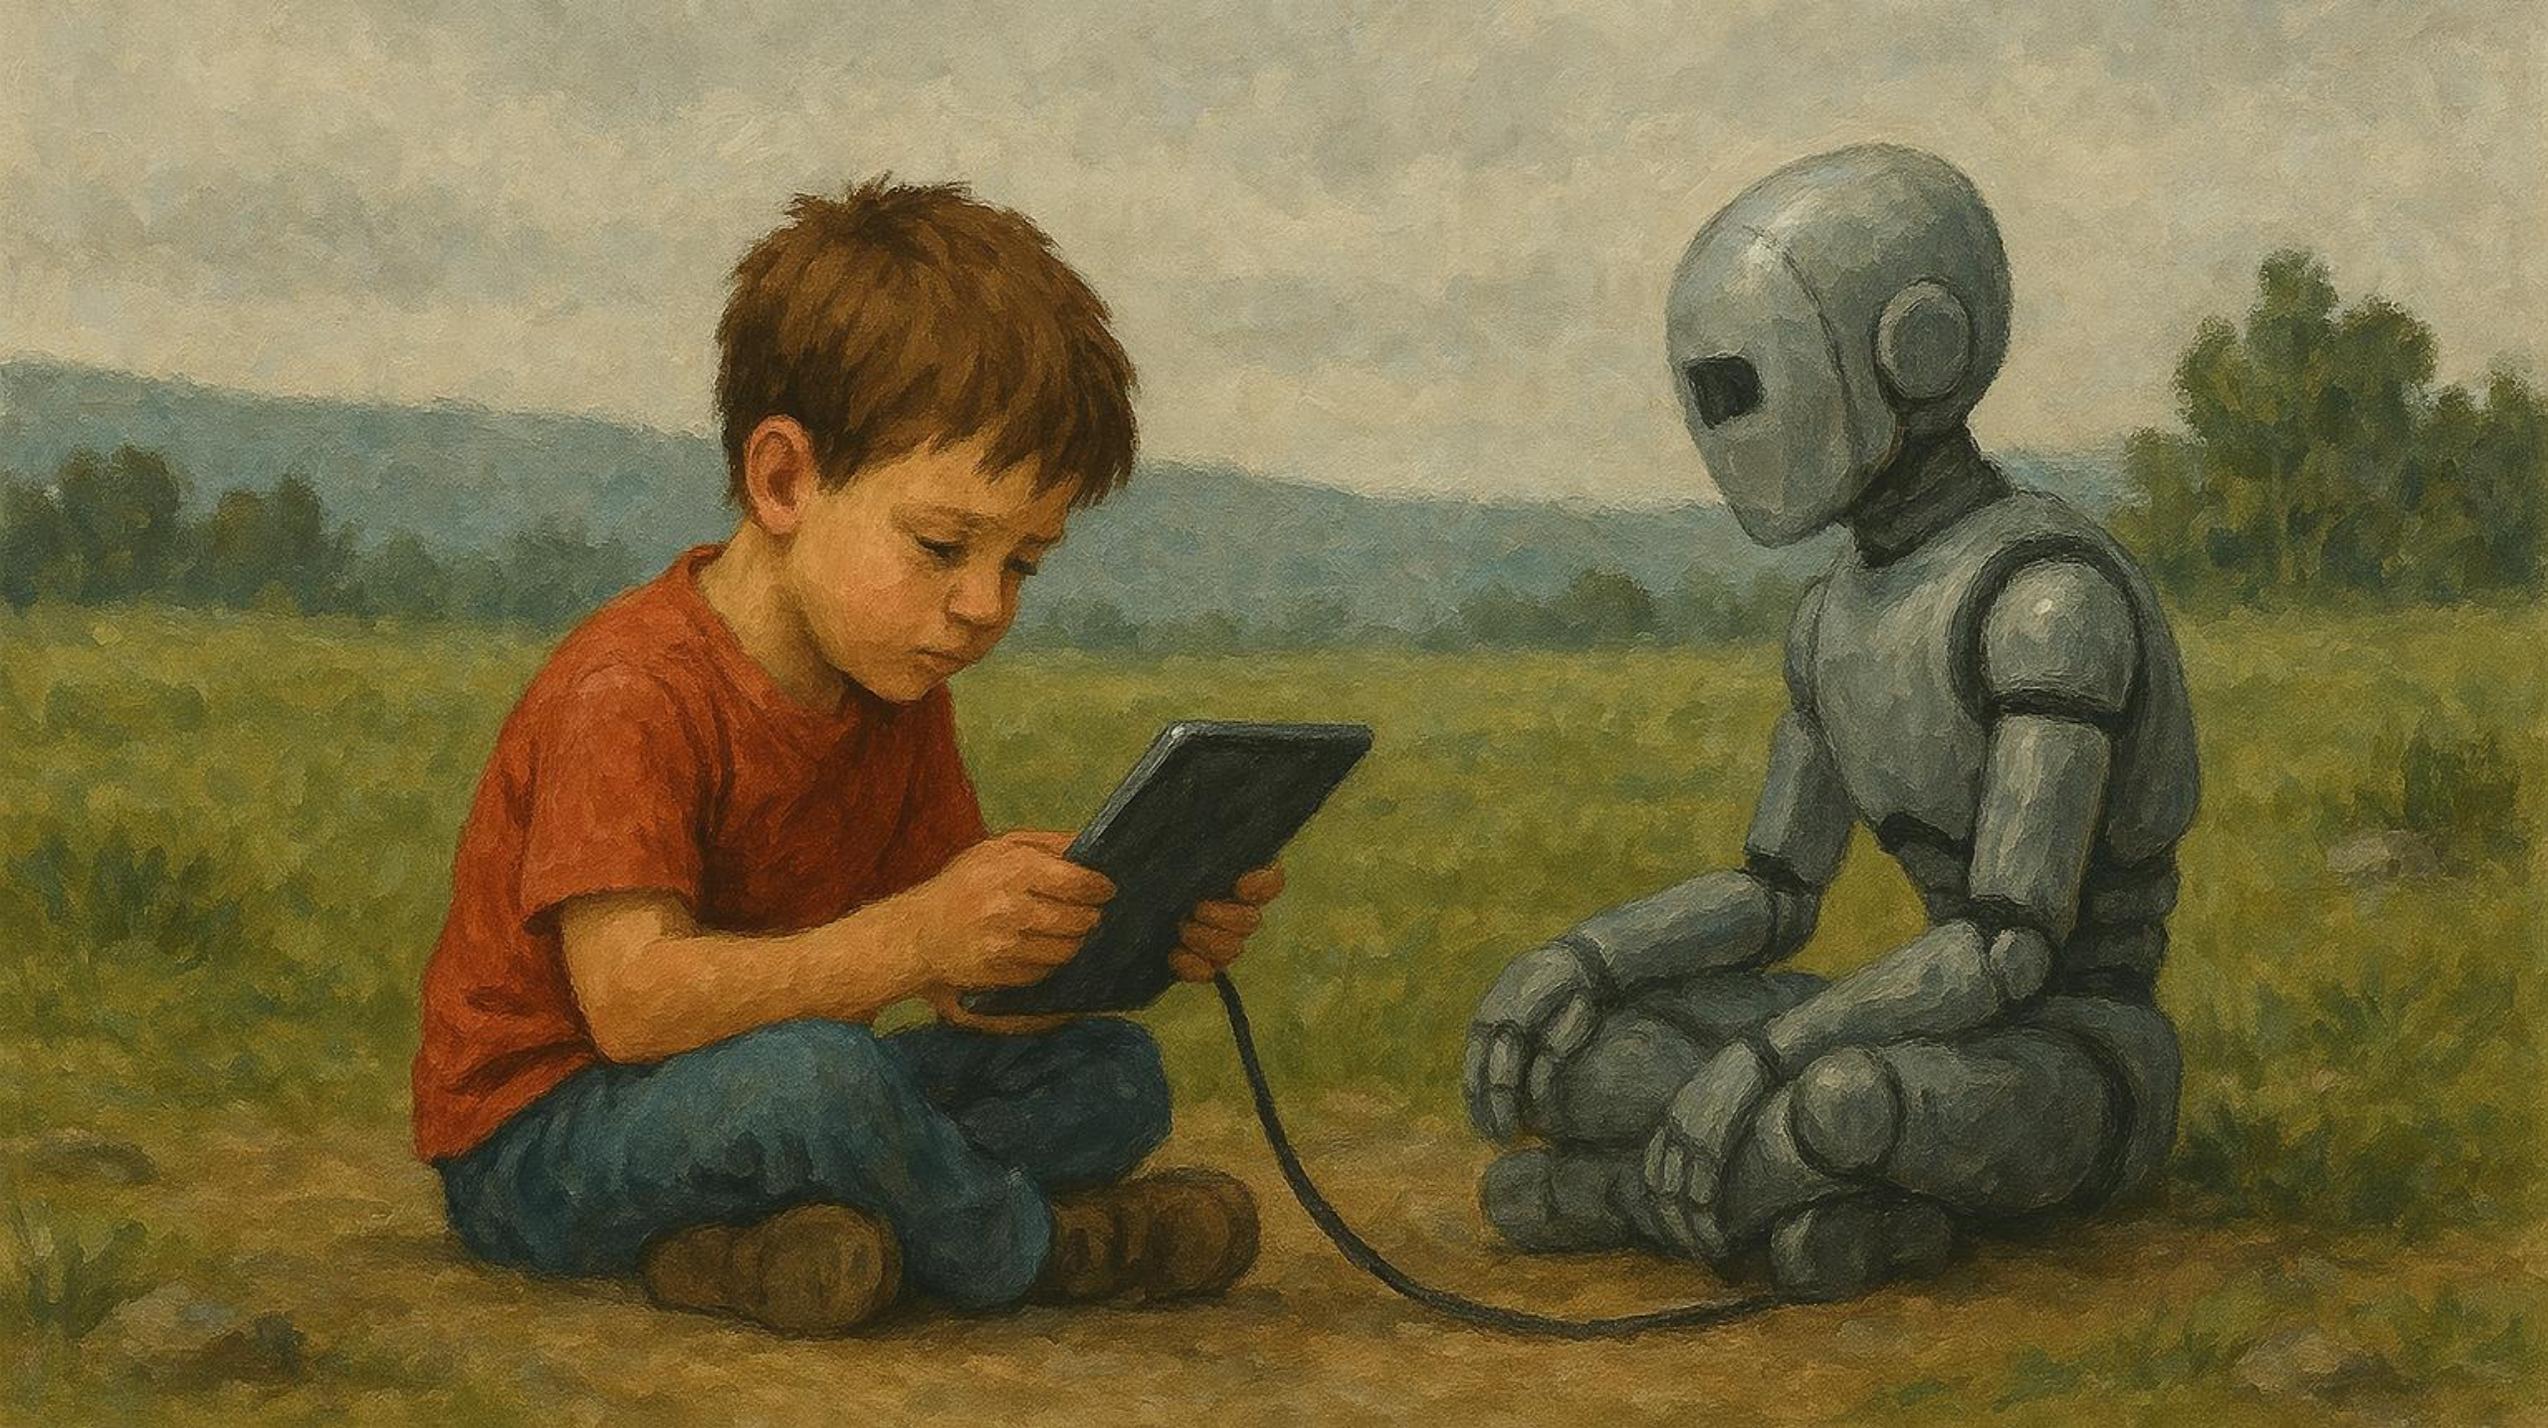

AI Image Generation

AI Image Generation

Ethical and social implications

AI Image Generation

- **Is it Art?**
- **Concerns for digital art industry.**

Ethical and social implications

AI Image Generation

- **Misuse and Misrepresentation of AI-Generated Images**
- **Privacy and Consent Concerns**
- **Deepfakes and Non-consensual Content Issues**
- **Bias and Stereotypes in AI Image Generation**

Ethical and social implications

AI Image Generation

- **Ownership and Intellectual Property Rights Challenges**
- **Authenticity and Trust Concerns in Visual Media**
- **Psychological and Emotional Impact of AI-Generated**

Ethical and social implications

AI and advanced tech applications

- Unaddressed important implications of tech advances.
- Students are generally unaware of some of the deeper issues related to technology.
- These range from ethical dilemmas and deep fakes to privacy issues.

Conclusions - Discussion

This is just the beginning

- **ChatGPT elevates the threshold of cognitive skills at every level.**
- **What constitutes cheating?**
- **Different standards for adults and students?**

Conclusions - Discussion

This is just the beginning

- Which learning / cognitive skills do we need to build up to?
- How are they learned?

Conclusions - Discussion

Risks

- **Some cognitive skills at risk.**
 - Reading comprehension.
 - Summarization.
 - Breaking down a real life problem.
- **ChatGPT outperforming students at many age levels.**

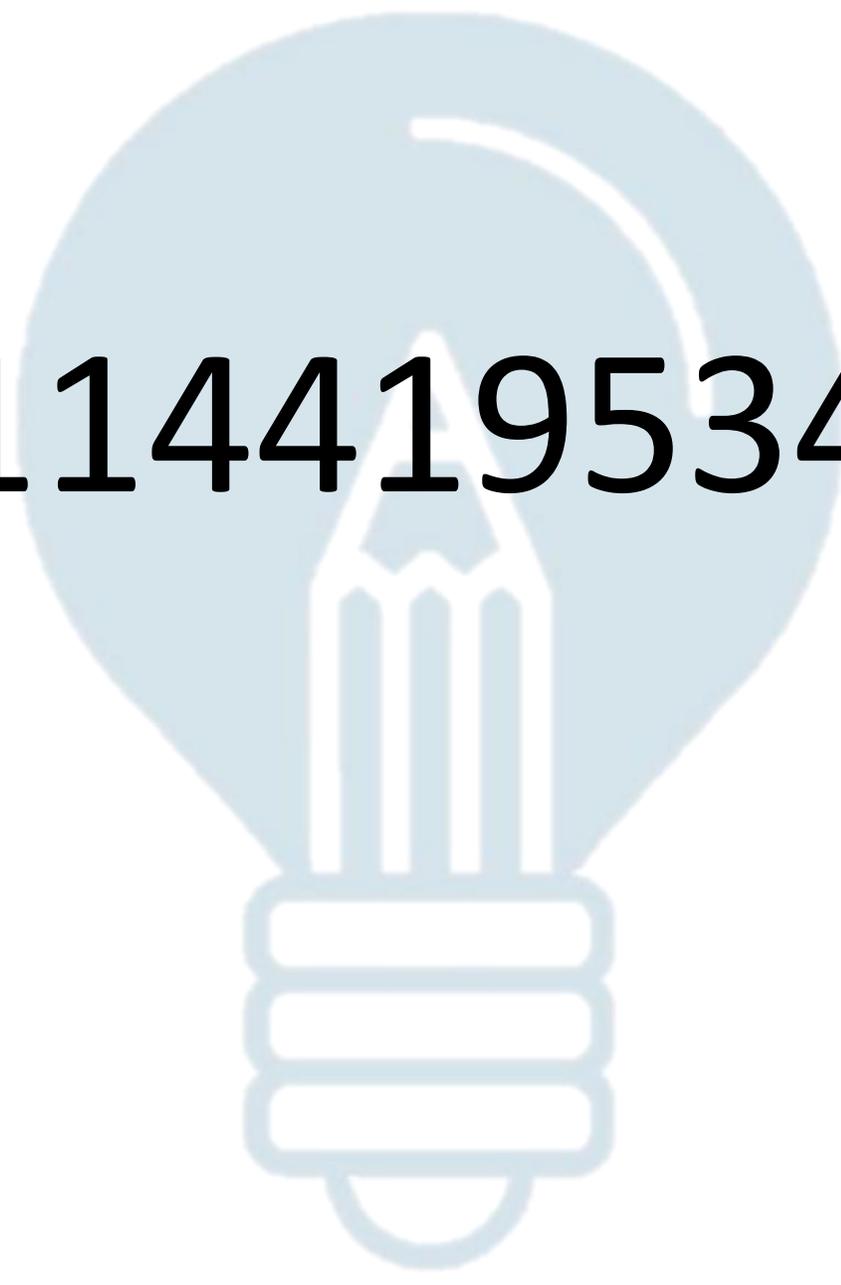

<https://weevolvedlabs.org/apshub/>

Implications - Teaching and Learning

- **Talk about the pedagogical implications regarding the advent and generalization of AI.**

+5491144195342

LEARNING RESEARCH

Implications – Ethical and Social

- **Talk about the ethical and social implications of AI for our students.**

Conclusions - Discussion

Benefits

- We can learn a whole lot more.
- Very significant step towards democratization of knowledge.
- Higher threshold for learning skills.
- AI unleashed for human good.
